

# Social and demographic challenges for sustainable development

Helge Brunborg  
Statistics Norway

Sustainable development in the Nordic Countries and in  
Estonia, Latvia and Lithuania

Nordic Council of Ministers  
5-7 December 2006

# What are the most serious social and demographic challenges ...

... for sustainable development of the welfare society?  
- and for preserving it?

- Low fertility?
- High mortality levels or disturbing differentials?
- Divorces and dissolved families?
- Young mothers?
- Urbanization?
- Migration?
- Declining population size?
- **Population ageing!**

# Population growth in EU countries 2005-2050

## Proportion of population aged 80+

# Population ageing

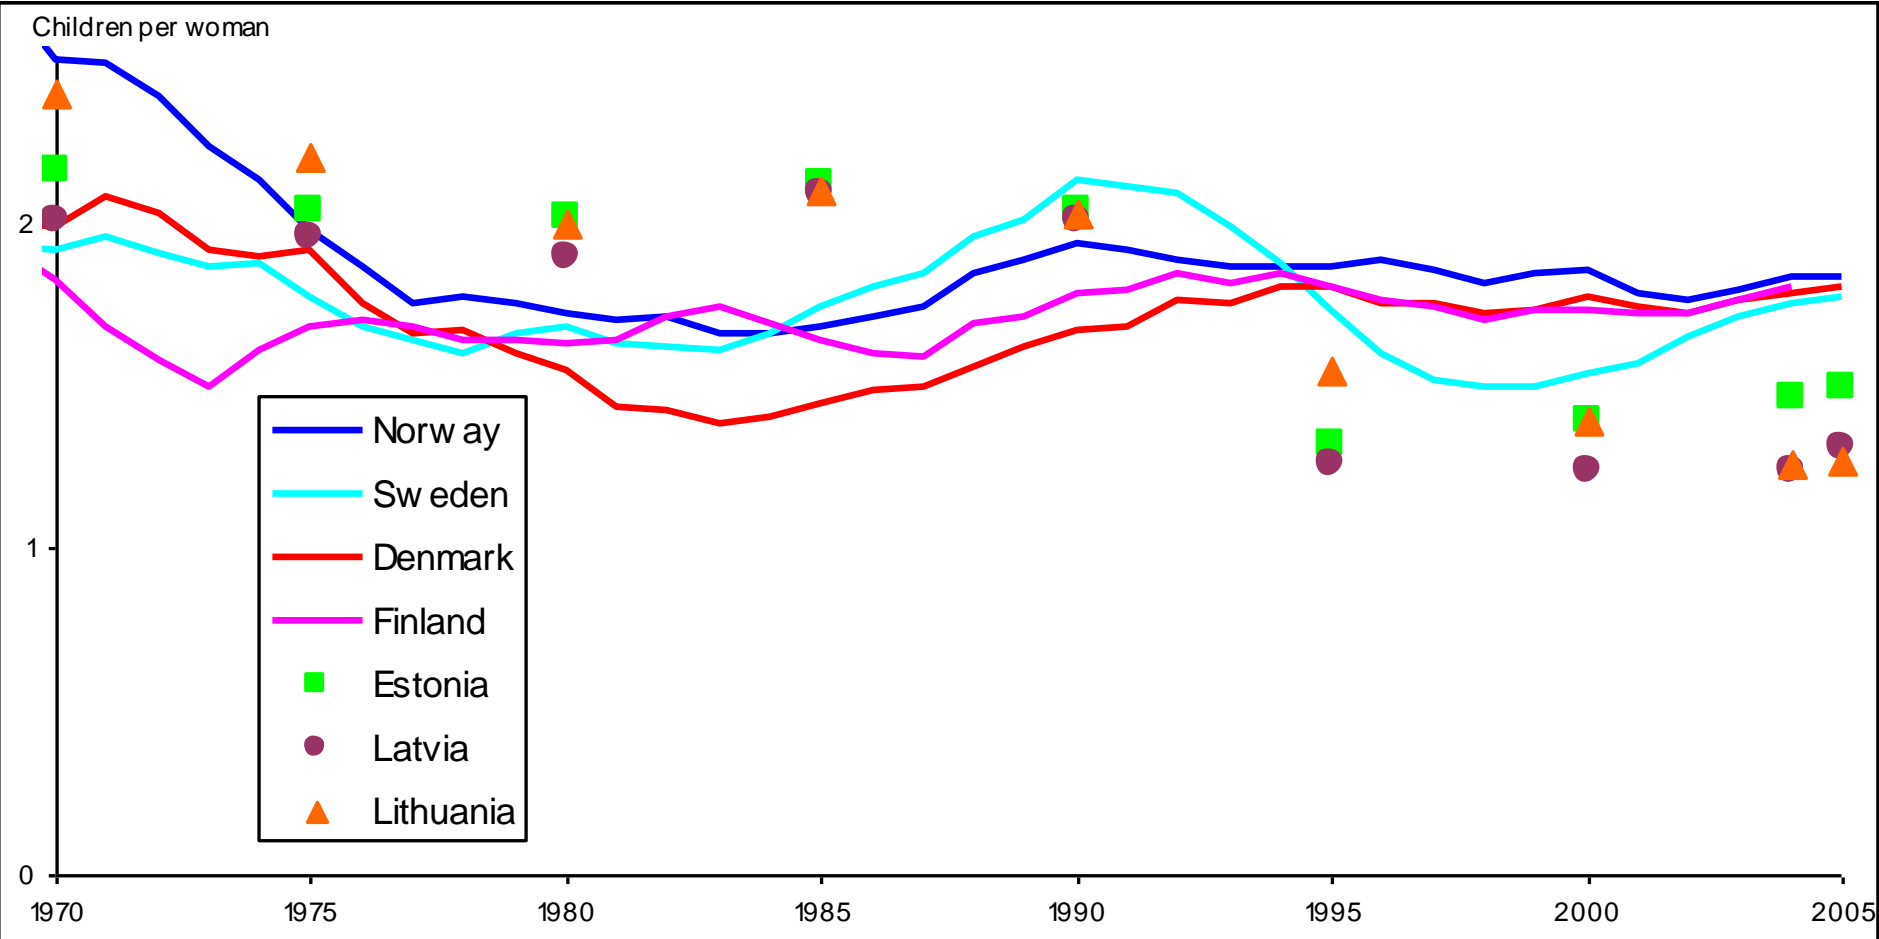

- Caused by 100-200 years of demographic change, especially:
- Increasing life expectancy
- Declining number of children per woman

# Total fertility rate

## Children per woman

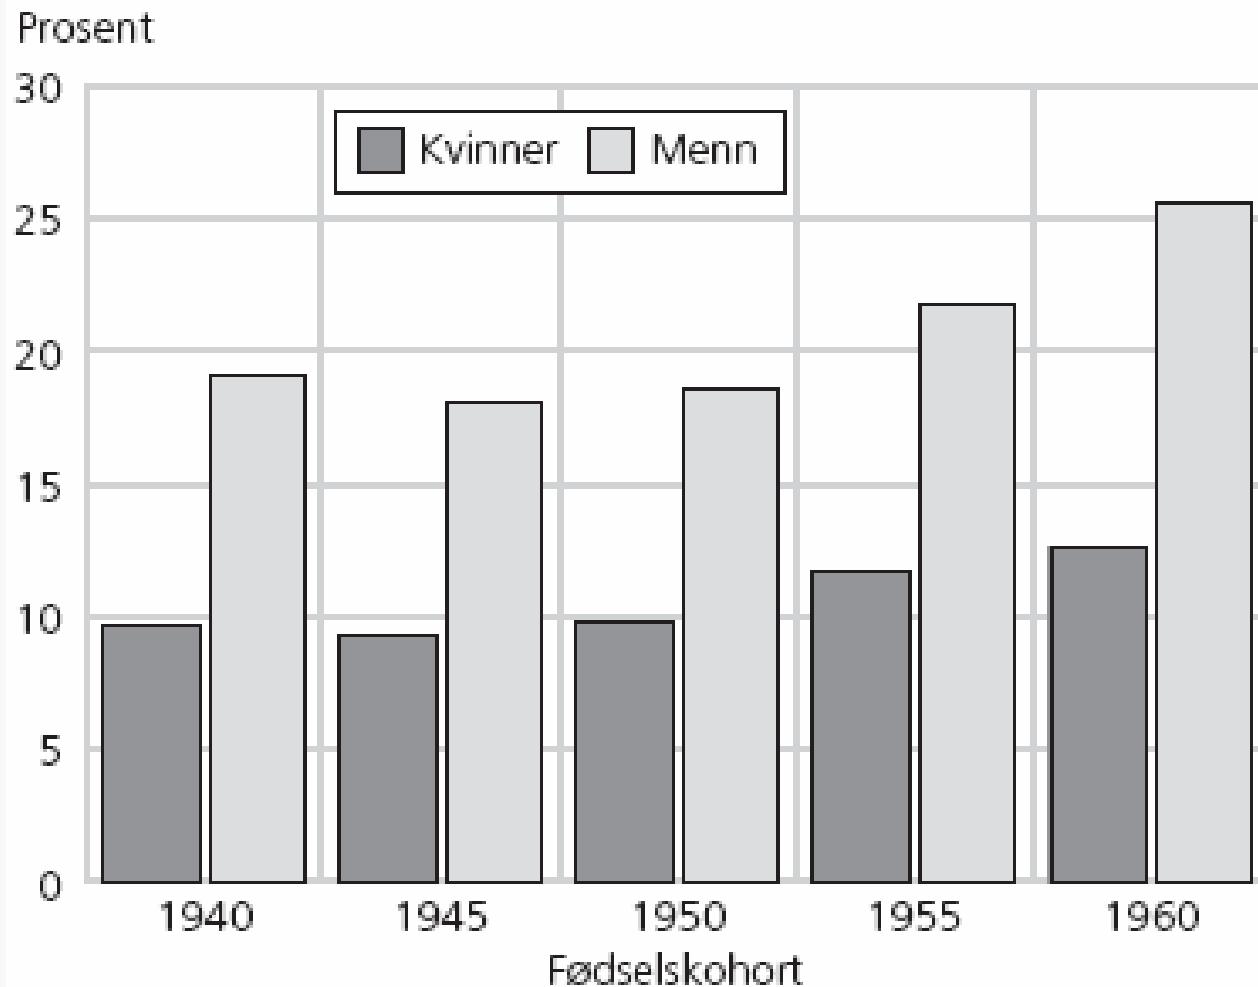

# Total fertility rate

# Per cent childless at age 40 for birth cohorts of women and men

Figur 3. Andel barnløse ved 40 år: Utvalgte fødselskohorter 1940-1960. Kvinner og norskfødte menn

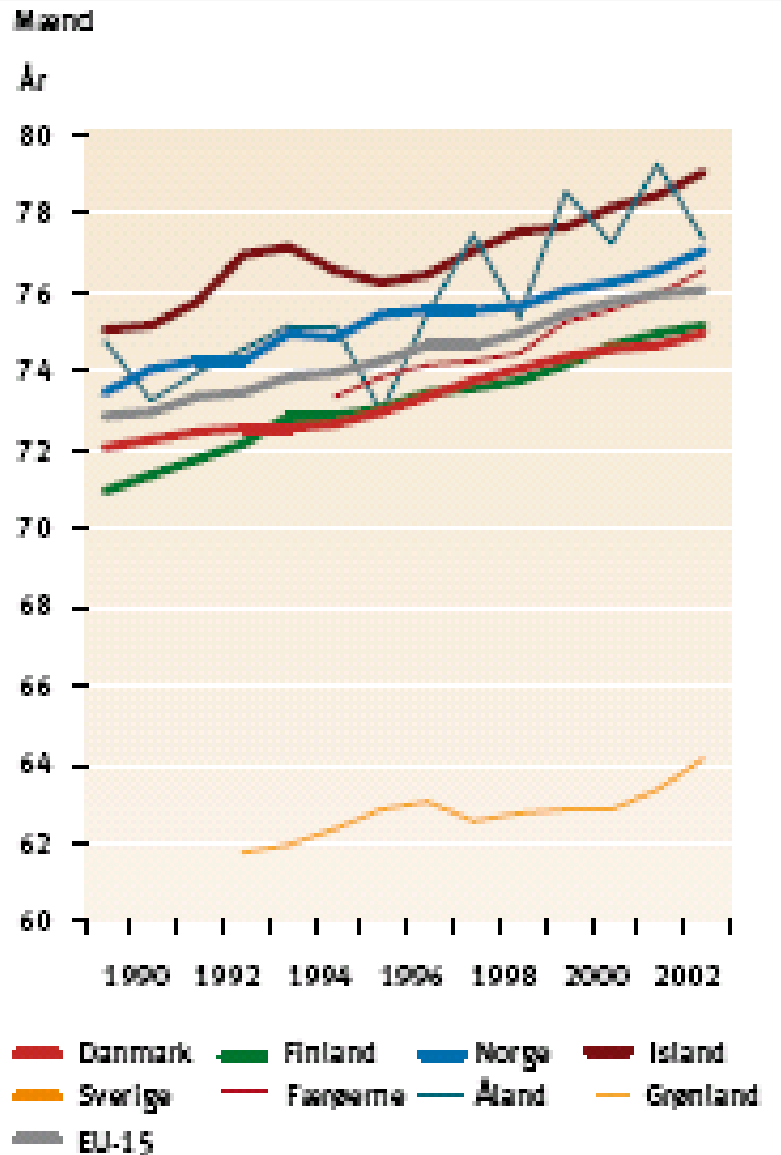

## Is the relatively high fertility level in the Nordic countries sustainable?

- Family-friendly policy
- Gender-segregated labour market
- Increasing childlessness for highly educated women – and men
- Gender equality light?

# Life expectancy at birth in Norway

# Life expectancy in the Nordic countries

# Life expectancy at birth for men and women 2004

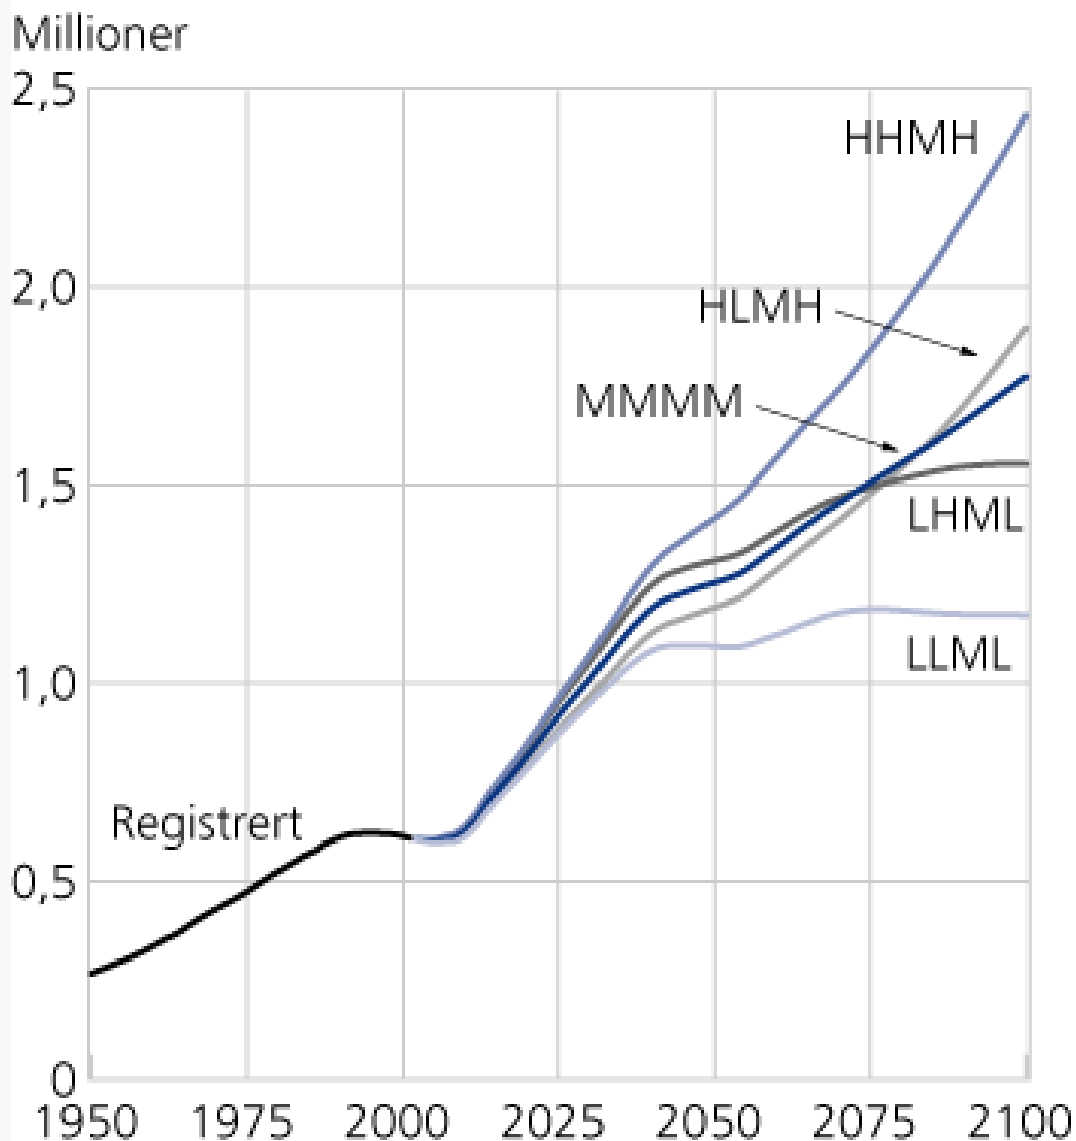

# World championship in life expectancy

Women (red circles) og men (blue circles)

# Figur 7. Antall personer 67 år og over 1950-2100

## Population 67+ in Norway 1950-2100

Kilde: Befolkningsframskrivingene.

# Population 80+ in Norway 1990-2060

# Old age dependency ratio in Norway 1990-2060

Number of persons 67+ per 100 persons 20-66

# Old age dependency ratio 2005 and 2050

Number of persons 65+ per 100 persons 20-64

# Some consequences of ageing

- A shrinking part of the population has to support an expanding part:
  - Pensions
  - Medical treatment
  - Care
- Can we afford to keep all the good parts of the welfare system?

# Prevalence of old age dementia

By age, Norway 2002

## Employment needs in the nursing and care sector according to different population projection variants, constant health

Figur 2. Sysselsettingsbehov i pleie- og omsorgssektoren ved ulike forutsetninger i befolkningsframskrivningen (uendret helsetilstand)

# Families and households

- Both need and supply of care affected by family and household structure ...
- ... especially for people living alone and with small networks
  - divorced
  - childless
  - single

## Is population ageing temporary and will disappear after some time?

- No – there is no "age wave" that will retreat
- We are getting a permanently high level of ageing
  - Considerably higher than today
  - Not necessarily constant

# Sustainable development

- Meet the needs of the present generations without compromising the ability of future generations to meet their own needs
- Is the current population development in the Nordic – and Baltic – countries sustainable?
  - Fertility below the reproduction level
  - High net outmigration in the Baltic countries
  - Rapidly ageing population

# How can we meet the challenges from an ageing population?

## 1. Demographic "solutions"

- Increase fertility?
- Change migration flows?
- Less resources to increase life expectancy?

**Conclusion: Expensive, uncertain and ineffective solutions**

# Options for solving the ageing problems:

## 2. Economic “solutions”

- Increase labour force participation & decrease unemployment (esp. youth, women, immigrants, disabled)?
- Reduce sick leave?
- Increase productivity?
- Increase taxes?
- Reduce expenditures for the elderly (pensions, health services and care)?
- Increase the pension age?
- Reform the pension system?

A photograph of a sunset over a body of water. The sun is a bright yellow-orange circle in the center of the frame, with its light reflecting down the water's surface. The sky is a gradient of orange and red, and the mountains in the background are dark silhouettes.
